EXPERIENCE

Discover Financials

Application Architect - 8/2011 - Present
Phoenix, Arizona

Helping define coding standards and best practices for building rich internet applications. Define application requirements and initial application setup built on Robotlegs MVCS framework.

TekSystems

Senior Flex Developer - 3/2011 - Presentm
Omaha, NE

Currently contracting with Northrop Grumman working for SEAMS on AFW-WEB, Department of Defense contract. Using the following tools, Mercurial, Robot Legs, BlazeDS, Convergence and Flex/Flash Builder.

MMG Worldwide

Senior Flash Developer - 8/2009 - 2/2011
Kansas City, MO

As a Senior Flash Developer, I was responsible for defining the ActionScript and MXML architecture on larger scale projects, as well as code documentation and API's. On a typical project, I managed 1-2 junior developers and mentored them on the best coding practices and Model View Controller design pattern. Some projects I was responsible for were building out the PHP server side and implementing ZendAMF for communication with ActionScript. I also provided technical direction for ActionScript integration to .NET developers.

Typical projects were built using Flex 3 and Flash Builder with implementation of swc libraries for graphical assets as well as custom MXML components. By using custom assets built out of Flash I was able to shave almost 200k off the final file size making for a more efficient project.

Barkley

Senior Flash Developer - 3/2006 - 8/2009
Kansas City, MO

As a Senior Flash Developer, I was responsible for creating and building cutting-edge Flash/Flex applications, games and websites for major clients such as Lee Jeans, March of Dimes, Sonic Drive-Ins, and Build-A-Bear. One of my main responsibilities was to help determine which emerging technologies were suitable for use, and their implementation on projects.

I split my development time between Flex 3 and Flash for each project. Relying on Flex for class authoring and code documentation. Flash was used for animations and graphical asset creation. Adopting this method allowed me to deliver smaller more efficient files.

Aurora Consulting Group

Multimedia Developer - 2/2002 - 2/2006
7641 Seneca Street, East Aurora, NY

As Lead Multimedia Developer, I was responsible for architecting ActionScript content for both web and embedded devices for Fisher-Price. I also acted as Account Manager and Project Lead while managing a department for a multi-million dollar project.

Xerox Corporation

Multimedia Designer / Web Designer - 10/2000 - 10/2001
100 Clinton Avenue South, Rochester, NY 14644

Xerox is a corporation that demands outstanding business communications. My role at Xerox was much broader than my title as a Multimedia Designer / Web Designer. My responsibilities ranged from complete project management to taking care of all of my customers' needs as an account executive. I also functioned as a creative director, developing conceptual themes based on client information and current market research. I am very comfortable establishing a creative direction while supervising a team to complete the project from concept stage to final production. At Xerox, each project required a detailed cost analysis, which I prepared and tracked for every client. I pride myself on the wide range of design and multimedia skills that were critical to produce powerful, cost-effective marketing communications for Xerox Corporation.

Robert Brookson Design

Senior Designer - 10/1998 - 10/2000

As senior designer, I was responsible for many different projects and functions in the agency, from conceptual planning of a project to final execution of the finished product. Many skills are required to see a project through to completion, and my expertise in graphic design is a valuable asset, whether the job is for the internet or for print. While at Brookson, I worked closely with many large clients.
